>> Overview of the B.Tech Artificial Intelligence and Data Science (AIDS) programme at MSAJCE, explaining what AI and Data Science are, the programme focus, and career opportunities for graduates.

Department of Artificial Intelligence and Data Science — MSAJCE

Artificial Intelligence (AI) is the process of creating machines to think like humans. AI is a term used to describe the simulation of human intelligence processes in machines. It typically involves sophisticated algorithms that enable computers to perform tasks that normally require human intelligence, such as visual perception, speech recognition and decision making.

Data Science is a field of knowledge which applies advanced statistical and mathematical techniques to large datasets in order to extract knowledge from them. Data can be structured like a spreadsheet or unstructured like text or video data. Data science is the application of techniques from statistics, mathematics, computer programming and other fields to solve real-world problems using information technology.

Due to the exploration of the Internet, AI and Data Science deliver data-driven solutions using computational principles, methods, and systems for extracting information from data and modern computational systems that reveal capabilities of insight, way of thinking, learning, and action that are typical of human intelligence.

B.Tech Artificial Intelligence and Data Science (AIDS) has emerged as one of the most high-growth, dynamic, and lucrative careers in technology since 2015. This course aims at providing core technologies such as artificial intelligence, data mining, and data modeling, and also gives intensive inputs in areas of machine learning and big data analytics. Students gain cross-disciplinary skills across fields such as statistics, computer science, machine learning, and logic. Career opportunities exist in healthcare, business, e-commerce, social networking companies, climatology, biotechnology, genetics, and other important areas. The major focus of this programme is to equip students with statistical, mathematical reasoning, machine learning, knowledge discovery, and visualization skills.

The programme also deals with core principles and ethical issues in Data Science and AI, and motivates students to explore cutting-edge applications related to Big Data, Neural Networks, and Deep Learning. Applications like Alexa/Siri, Erica/Sophia, Tesla's driverless car, Chat-bot, etc. are becoming common. AI-powered Robots can take over human life-endangering jobs like firefighting, deep-sea oil drilling, and mining works with high mortality rates.
